

# Ice Age floods National Geologic trail

This first of its kind geologic trail was authorized in 2008

Spring 2012 Update

# Tops of Basalt Colonnades

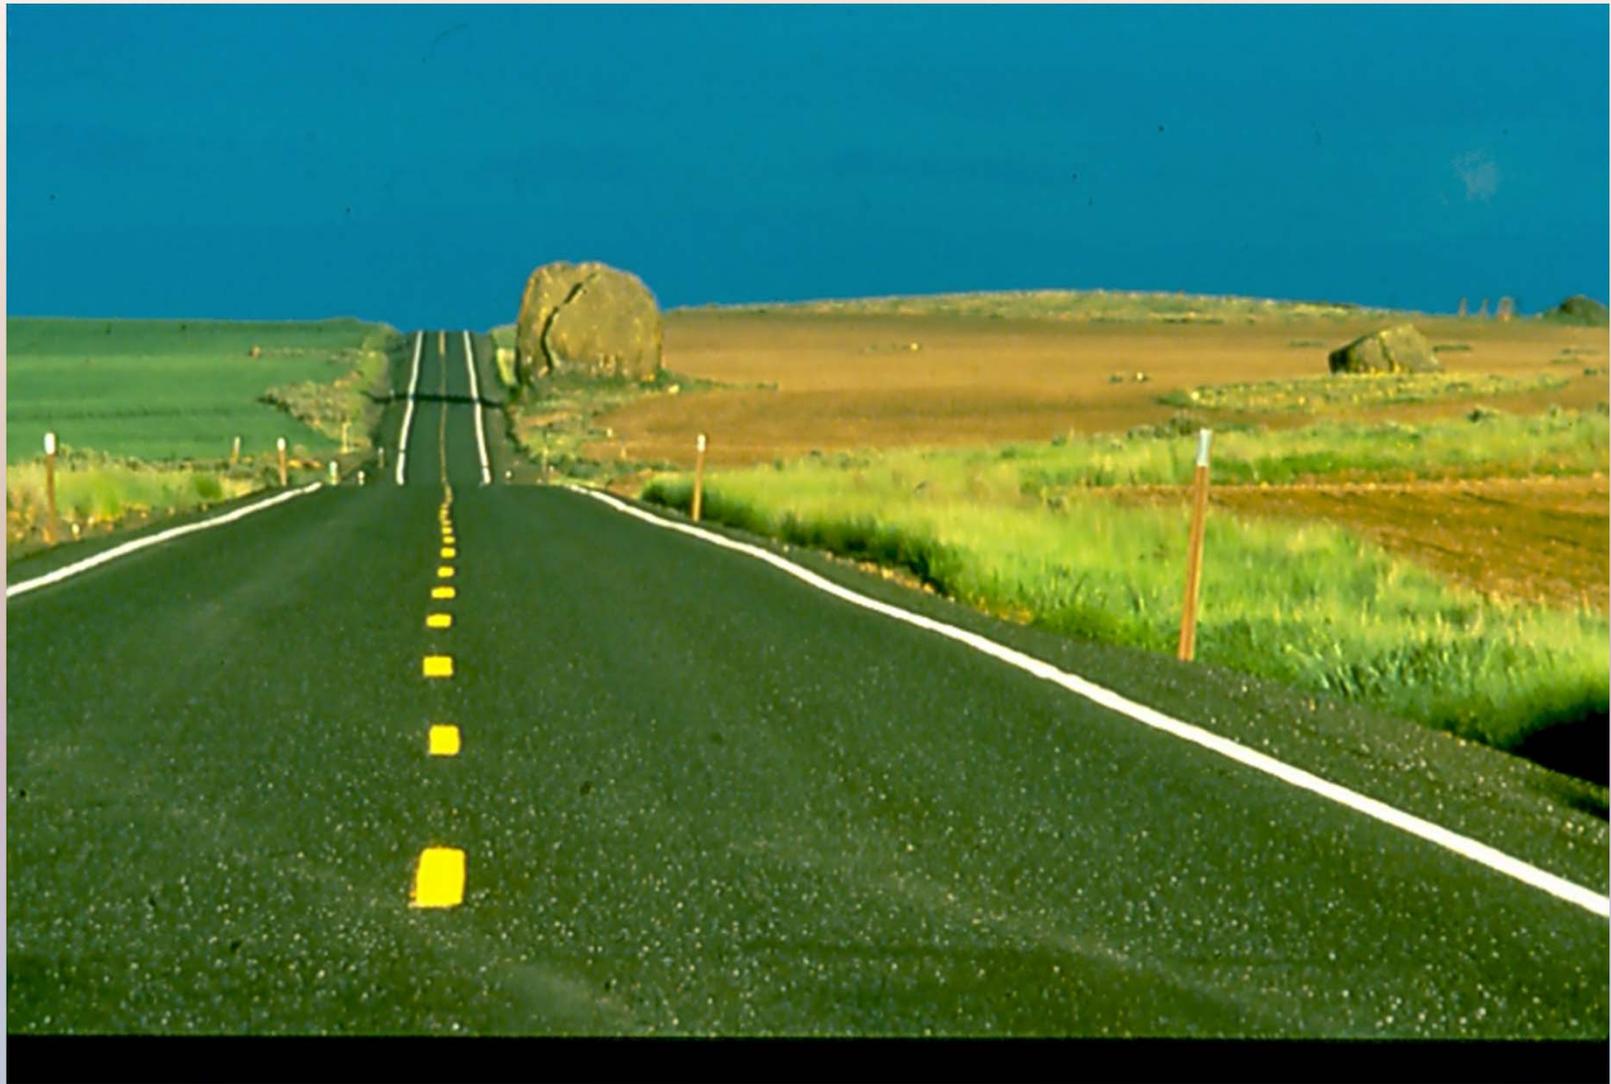

**Figure 2.** Palouse Falls within Palouse Canyon, southeast Washington. Palouse Canyon was cut through about 500 feet of basalt lava in several days when the Lake Missoula flood overtopped a ridge.

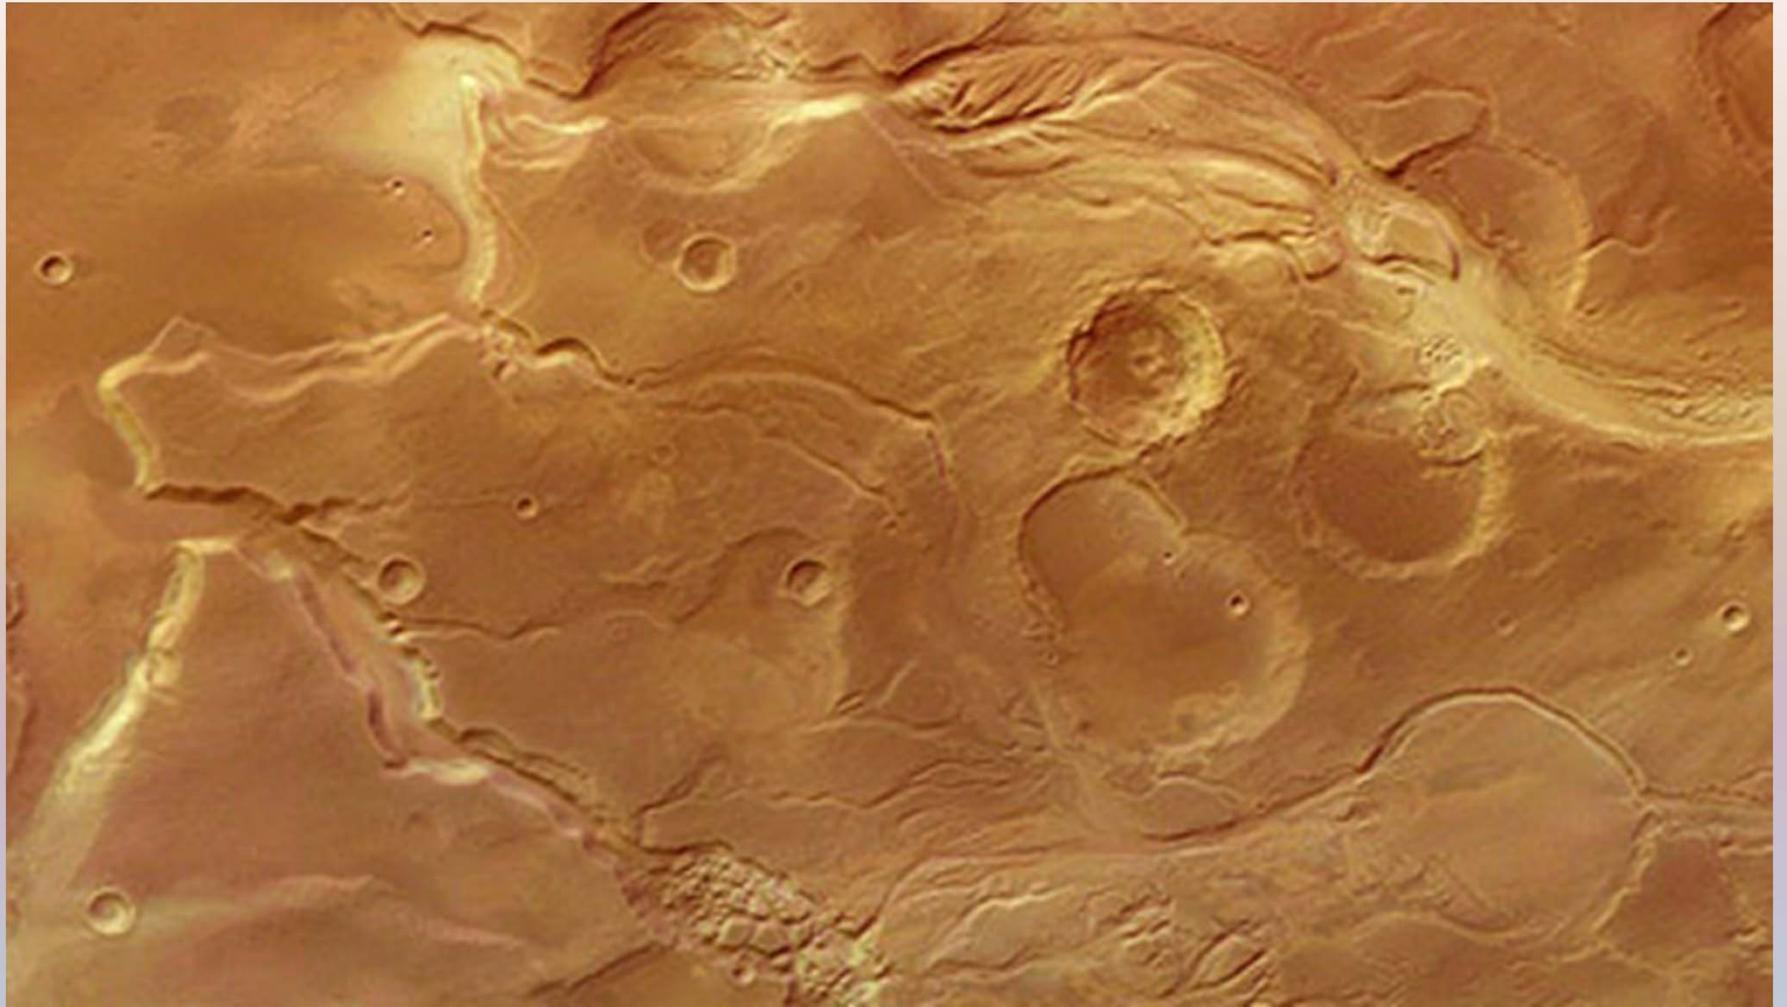

Rock Fall

Gravel

Layered Sediments

Cross-Bedded Sands

Paleo-Flow  
Direction

# High Water Stone Markers

# J. T. Pardee Family Materials

**Figure 1.** Shorelines of glacial Lake Missoula along the eastern hills of the Little Bitterroot Valley, 75 miles northwest of Missoula, Montana.
